

Assignment 5

This assignment contains multiple parts. Please read the assignment instructions carefully. Missing parts may significantly lower your score.

1. Write pseudocode for a method that subtracts two numbers. Your pseudocode must show the method Header and return a value. Pseudocode must be properly indented. and aligned:

Method Header

- access specifier - private
- return type - num or double
- method name - *calcNetPay*
- parameters - a number named *grossPay*, a number named *deductionAmount*

Method Body

- Declare a variable that holds a number. Name it *netPay*.
- Subtract *deductionAmount* from *grossPay*
- Assign the result of the calculation to the *netPay* variable.
- Return the number named *netPay*

2. Create **class diagrams and pseudocode** for the Name and Address class on Page 295 Exercise **Only the Name and Address classes.**

3. Create **class diagrams and pseudocode** for page 292 Exercises 3, 4, and 5.

4. Create class diagrams only for exercises 1a, 2a (*skip the overriding requirement*), and 3a on Page 333 of your textbook. Show the base class and the derived class. **You must use flow lines to show relationships between the classes.** Use diagrams.net or lucid chart to complete this exercise. (Note: *Working with class diagrams in diagrams.net may be tedious. Lucid chart might be a better choice for this assignment.*)

5. As Part of this week's discussion, set up a Github repository following these instructions:
