

2) Class Diagrams and PSEUDOCODE from Page 295:

NAME AND ADDRESS CLASS DIAGRAMS:

[Arvanetes - Assignment 5: Activity 2 Class Diagrams](#)

NAME Pseudocode:

Class Name

private String firstName

private String lastName

public void setFirstName(String firstName)

assign firstName to the firstName field

public String getFirstName()

return firstName field

public void setLastName(String lastName)

assign lastName to the lastName field

public String getLastName()

return lastName field

End Class

Address Pseudocode:

Class Address

private String streetAddress

private String city

private String state

private String zipCode

public void setStreetAddress(String streetAddress)

assign streetAddress to the streetAddress field

public String getStreetAddress()

return streetAddress field

public void setCity(String city)

assign city to the city field

public String getCity()

return city field

public void setState(String state)

assign state to the state field

public String getState()

return state field

public void setZipCode(String zipCode)

assign zipCode to the zipCode field

public String getZipCode()

return zipCode field

End Class
