

3) Class Diagrams and PSEUDOCODE from Page 292:

TermPaper, Automobile, and CheckingAccount Class Diagrams:

Arvanetes - Assignment 5: Activity 3 Class Diagrams

TermPaper Pseudocode:

Class TermPaper

private String authorName

private String subject

private String letterGrade

public void setAuthorName(String authorName)

assign authorName to the authorName field

public String getAuthorName()

return authorName field

public void setSubject(String subject)

assign subject to the subject field

public String getSubject()

return subject field

public void setLetterGrade(String letterGrade)

assign letterGrade to the letterGrade field

public String getLetterGrade()

return letterGrade field

public void displayInformation()

display authorName

display subject

display letterGrade

End Class

Automobile Pseudocode:

Class Automobile

private String vehicleID

private String make

private String model

private String color

public void setVehicleID(String vehicleID)

assign vehicleID to the vehicleID field

public String getVehicleID()

return vehicleID field

public void setMake(String make)

assign make to the make field

public String getMake()

return make field

public void setModel(String model)

assign model to the model field

public String getModel()

return model field

public void setColor(String color)

assign color to the color field

public String getColor()

return color field

public void displayInformation()

display vehicleID

display make

display model

display color

End Class

CheckingAccount Pseudocode:

Class CheckingAccount

private String accountNumber

private String accountHolder

private double balance

public void setAccountNumber(String accountNumber)

assign accountNumber to the accountNumber field

public String getAccountNumber()

return accountNumber field

public void setAccountHolder(String accountHolder)

assign accountHolder to the accountHolder field

public String getAccountHolder()

return accountHolder field

public void setBalance(double balance)

assign balance to the balance field

public double getBalance()

return balance field

public void displayInformation()

display accountNumber

display accountHolder

display balance

End Class
